

Perimeter Web App Feature User Guide - Bulk Data Update

Perimeter now supports **bulk updates** of map data. Admins can bulk update the **Visibility & Status** of previously published data. This will help emergency managers expedite their response effectiveness before, during and after events - by allowing faster updates.

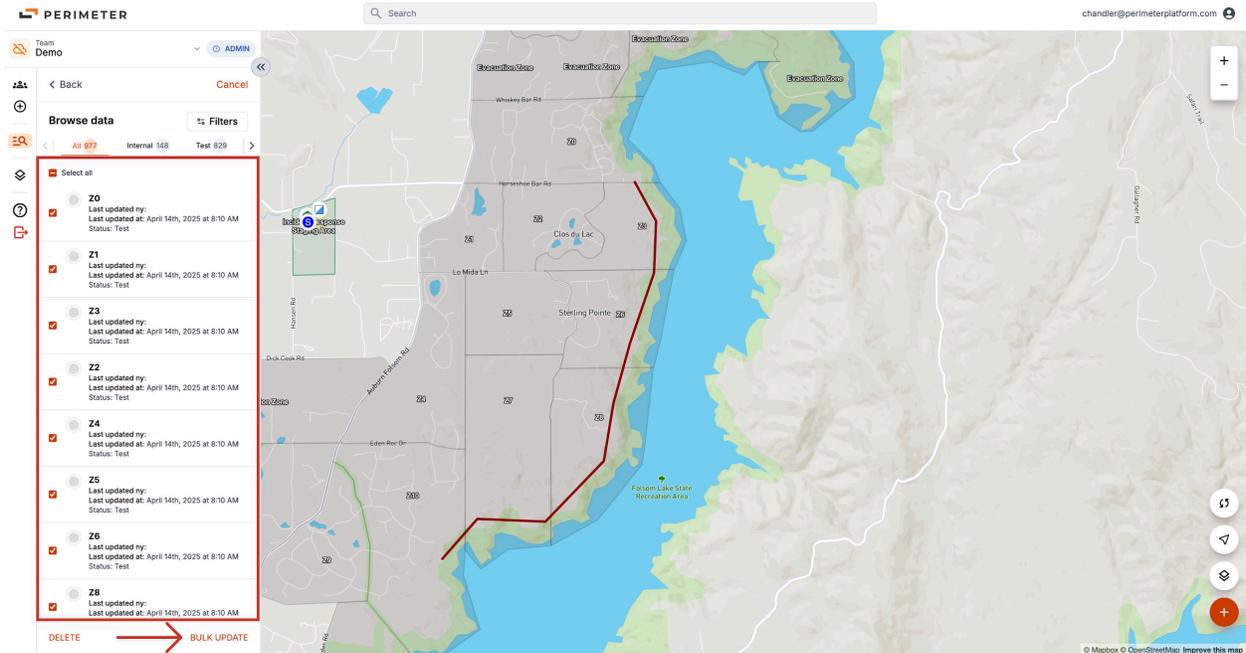

In the navigation Menu, click “Browse Data”

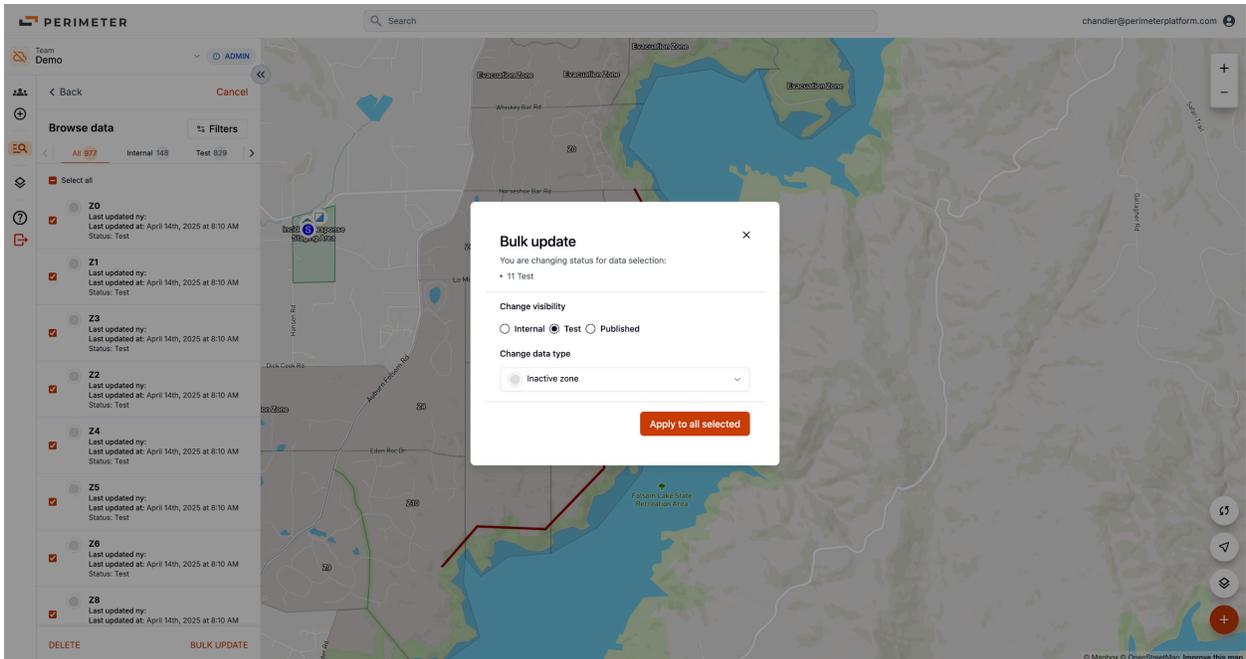

Click “Select”, this will open checkboxes next to each data value.

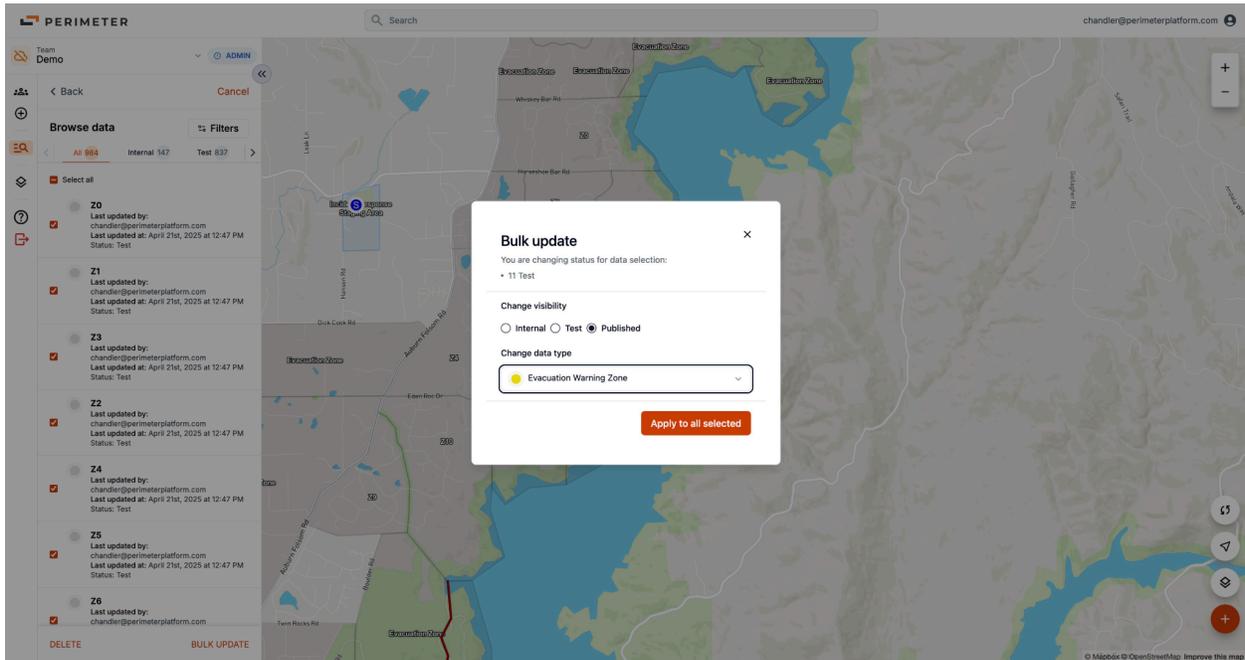

Select the data you want to update (in this example we will update the visibility of 11 zones)

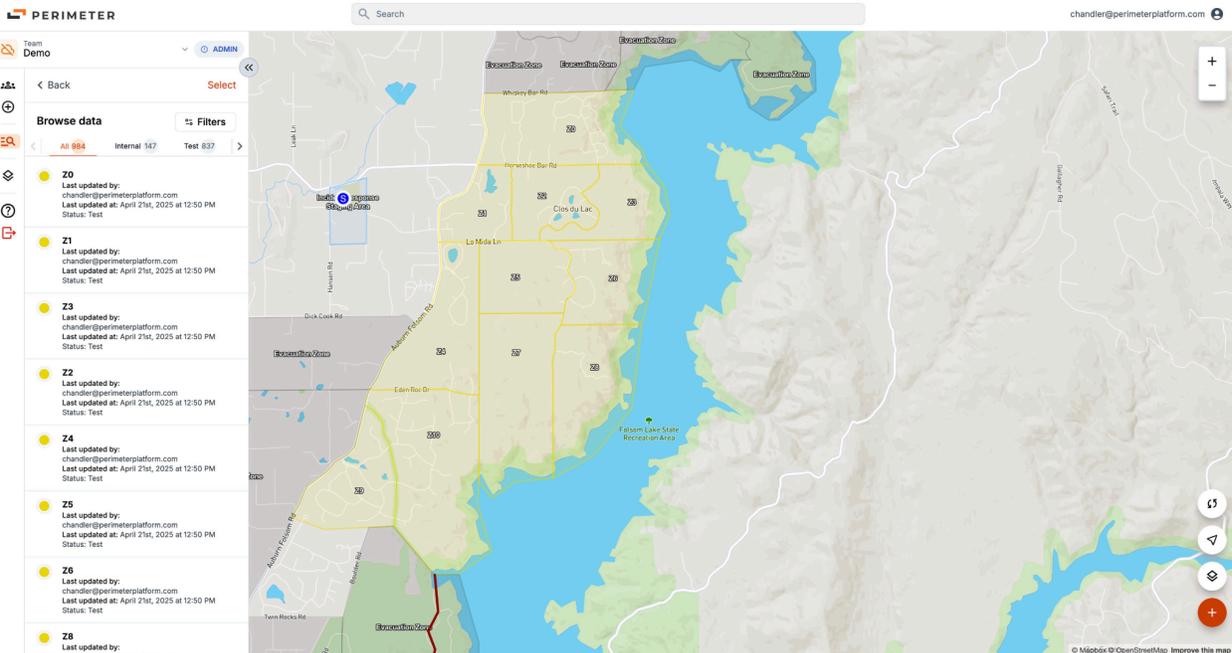

Click "Bulk Update", this will open a popup asking what you want to update.

Select the options you would like to update.

Click “Apply to All Selected” to immediately see the bulk updated area.

Summary: In this example, we updated all 11 zones simultaneously from “Inactive” status to “Evacuation Warning Zone” status. Please note: when a bulk edit has been made, it cannot be undone without redoing a bulk edit.
